Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/R4J-X/Personalized-Networking-Assistant
Programming Language(s)	Python
Framework(s) Used	FastAPI, Streamlit, Hugging Face Transformers
Key Features Implemented	• Event theme extraction using DistilBERT • Personalized conversation starter generation using GPT-2 • Fact checking using Wikipedia API • Conversation history storage • Feedback (Like/Dislike) system
Pending / Incomplete Features	• User authentication • Multi-user support • Voice input/output • Cloud deployment
Setup / Run Instructions	install the required packages using <code>pip install -r requirements.txt</code> , start the backend server with <code>uvicorn app.main:app --reload</code> , and then run the frontend using <code>streamlit run frontend/app.py</code> . Open the Streamlit URL in your browser to use the application.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The project follows a modular three-tier architecture consisting of a Streamlit frontend, FastAPI backend, and independent AI service modules, making the application maintainable and reusable.
