Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	No
6	Deployed application URL (if hosted)	No
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	Yes
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

/9.Programmes and codes

```

— app/
  — main.py
  — routes/
  — services/
  — models/

— frontend/
  — streamlit_app.py

— tests/
— docs/
— data/
— README.md
— requirements.txt
— Dockerfile
— LICENSE
  
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not Hosted (Local Deployment)
Login Credentials (Demo)	Not Required
Platform / Hosting Provider	Local System
Repository Link	https://github.com/R4J-X/Personalized-Networking-Assistant
Demo Video Link	https://drive.google.com/file/d/1VvqjEIYaf1wUsaNw_CeV_0N4svdEpRIV/view?usp=sharing

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Step 1: Ensure that Python 3.9 or later, pip, and Git are installed on your system.

Step 2: Clone or download the project repository to your local machine.

Step 3: Install all the required dependencies by running `pip install -r requirements.txt`.

Step 4: Start the backend server using `python3 -m uvicorn app.main:app --reload`.

Step 5: Launch the frontend by executing `streamlit run frontend/streamlit_app.py`.

Step 6: Open a web browser and navigate to `http://localhost:8501` to access and use the application.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	First request is slightly slow because AI models load initially.	Models are cached after startup.
2	Application requires an internet connection for Wikipedia fact-checking.	Use a stable internet connection.
3	No user authentication or cloud deployment in the current version.	Planned for future enhancements.
